

## Congressional serial set Volume 2186

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1884 Excerpt: ...but doubt has been expressed whether, in case of adoption, the demand for material might not exceed the supply. Of this, however, there would seem to be little probability. Of the amount of horse and other hair suitable for such purposes produced within the limits of the United States, no statistics are at hand. But of imported hair, Treasury reports for 1880 furnish the following: Whalebone or baleen, is a horny substance consisting of fibrous lamina?, laid lengthwise along the upper jaw of the whale, overlapping each other like shingles on a roof. The plates of baleen in the mouth of a full-grown right whale are often 10 or 12 inches wide at the root ends and four to six-tenths of an inch thick. They are longest at about the middle of the series and sometimes measure 12 or 15 feet. They taper from the root to the free end, and are curved somewhat like a scythe. Along the concave edge is a kind of hairy fringe, varying in length from a few inches to a foot and a half, and in size from fine horsehair to the coarsest bristles. The size and quality of both bone and fringe vary greatly with the kind of whale producing them. Zoologically, whales, or mammalia of the cetacean order, are divided into two great families--blowing cetacea, so called from the habit of spouting water through the nasal openings or spiracles in the top of the head, and herbivorous cetacea (manati). The family of blowing cetacea is divided into two tribes--the tribe of whales (Balcena) and the dolphin tribe, distinguished mainly by the size and shape of the head. The whale tribe (Balanidw) is divided into the genus whale and the genus cachalot (sperm whale). The genus whale produces the baleen. The cachalot has none; but teeth i...
