

The copper-mining industry and the distribution of copper ores in New South Wales

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1908 Excerpt: ...such conditions of consolidation will some of the extensive low-grade cupriferous gold and silver deposits of the vicinity be turned to best account. For though at present the Cobar-Chesney Mine is the only other of the Cobar group that has developed copper ores of commercial importance, there is every reason to anticipate, at all events, an amount of copper ore in the lower levels of the others sufficient to render unprofitable any method of extraction other than smelting in the way indicated. Consideration of the present condition and future prospects of the coppermining industry of this State establishes clear-cut conviction of the advantages Cobar Misting District--continued. of a closer union or concentration of interests. Instead of vainly contending with refractory ores, combination with those requiring just such economic admixtures in the reducing and refining processes would prevent one section struggling with costly experiments, the other using perforce valueless fluxes. Cobar-Chesney and Girilambone illustrate one division; Great Cobar, Nymagee, and the refining plants, at Lithgow, the other. If community of interests and reduced railway freights could bring these divisions into touch, reciprocal advantage would accrue to both State and industry. The future possibilities of the extensive pyritic lode at Captains Flat,. under some such reciprocal provision, loom largely ahead as affording the means of treating refractory auriferous and argentiferous copper ores, whilst adding to them its own small quota of these metals, and at the same time it is to be hoped, utilising its valuable sulphur contents. The Cobar-Chesney Mine, after vain expenditure of capital and labour

fighting the difficulties of a separate existence after the free-milling ores wer...
