

The English Noble Household 1250-1600: Good Governance and Politic Rule (Family, Sexuality, and Social Relations in Past Times)

The English nobility - gentry, peers, bishops and abbots - organized much of their lives through their households, with vast conglomerations of servants working as companions, advisers and administrators, travelling, eating, worshipping, relaxing, labouring and living together. The very core of noble power and noble social life, households as such have never been the focus of an historical survey, despite large numbers of surviving household documents for the years 1250-1600. Drawing on this evidence as well as the information about households in contemporary literature, chronicles, and correspondence and court records, this book reveals how these massive institutions operated. The first half of the book deals with the mechanics of noble householding. Structures common to households are established, and the people who staffed and lived in these establishments are discussed. The author then discusses the importance of household accounts and accounting, considering the effect of household economic strategies upon the monetary health of the districts upon which the households relied. Finally, the book examines the role of the household in its masters or mistresses political machinations; the religious life of the household and the use of ritual to create unity, and the relationship of the family in households of minor noble classes in light of recent investigations into family history.
